THE ISLAMIA UNIVERSITY OF BAHAWALPUR
FINAL YEAR PROJECT PROPOSAL

Clinic Follow-Up & Treatment Outcome Tracking System

Program: BS Information Technology (BSIT) **Nature:** Development **Specialization:** Desktop Application

Introduction

Small clinics often rely on paper registers or spreadsheets to manage patient visits and follow-ups. This can lead to missed appointments, scattered records, and difficulty tracking patients' reported treatment experiences. The proposed desktop application will organize patient histories, appointments, prescriptions, and medicine feedback in one place.

Problem Statement

Manual record-keeping may cause missed follow-ups, human errors, delayed reminders, and limited visibility into patient-reported outcomes. How can a simple desktop system help clinic staff manage follow-ups and record feedback about prescribed medicines and treatment plans?

Goal / Objectives

Develop a secure, easy-to-use desktop system that can:

- Maintain patient profiles and visit history, including doctor notes, diagnosis, prescriptions, and follow-up dates.
- Identify upcoming and overdue follow-ups and show in-app reminder lists.
- Record medicine feedback at return visits: whether the patient took the medicine as prescribed, perceived benefit/improvement, side effects, missed doses, and concerns.
- Display the previous care plan, document treatment progress, and let the doctor update the plan and schedule the next follow-up.
- Generate basic visit and attendance reports.

Technology Stack

Language: Python **Desktop GUI Framework:** PySide6 (Qt for Python)
Database: SQLite **Tools:** VS Code, Python
Architecture: Layered desktop architecture (UI, business logic, data access)

Project Scope & Privacy

The system will support clinic record management and documentation only; treatment decisions remain the responsibility of qualified clinicians. Patient data will be protected through user login, role-based access where feasible, and regular backups. Medicine feedback represents patient reports, not proof of treatment effectiveness.
